

REMARKS

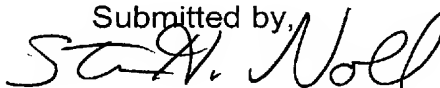

In the Office Action dated January 26, 2009, a number of informalities were noted in the claims, all of which have been corrected.

The specification was subjected to as failing to provide proper antecedent basis for the term "cured sealing compound" as used in claim 1. In response, the specification has been amended to include the adjective "cured" in front of the term "sealing compound 3." Since the claims as originally filed include the term "cured sealing compound," and since the original claims are a part of the original disclosure, no new matter is added thereby.

The drawings were objected to as not showing the RF coil and the gradient coil, that are set forth in the claims. In response, Figure 1 has been amended to schematically illustrate portions of those components. Since those components were described in the specification as originally filed as well as in the claims, no new matter is added thereby.

The claims were stated to be allowable over the prior art of record. Therefore, in view of the above editorial changes, all claims of the application are in condition for allowance. Early reconsideration of the application is therefore respectfully requested.
